DESIGN CUSTOM WATER BOTTLES

PREMIUM SPORT BOTTLE

BIO SPORTS BOTTLE PRODUCER

From 2020 **BIDONEX** has become a 100% ECO FRIENDLY company, in line with our vision of sustainable development. This development applies to both, the entire production process and the finished product, our water bottle that has become a BIO product.

Our products are free of BPA, lead and toxins, in addition every element of our water bottle can be recycled. From 2020, the information about the product recycling possibility is visible both, on the cup and on the bottom of a bottle.

What makes our product ECO and BIO:

- reusable water bottles
- 100% recyclable
- certified for contact with food
- no BPA, lead and toxins
- BIO (d2w®) component is used which causes the oxy-biodegradation of the product
- both, the production material and ink used for printing do not have hazardous ingredients (certified attested)
- implemented products in Bio-Based technology in the production process
- safe and hygienic production is ensured (including HACCP, GHP, GMP, PZH certificates)
- renewable energy sources (photovoltaics) are used
- raw materials only from renowned producers are used
- the whole production is located in the European Union

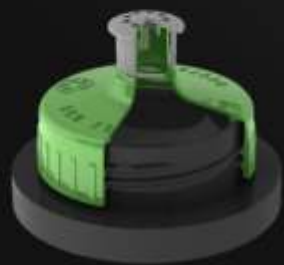

Our water bottles are certified for contact with food, are reusable, and can be used for a long period of time. Such bottle availability on the market changes the habits of consumers, and as a result reduces consumption of the most environmentally harmful, disposable PET bottles thanks to which less plastic packaging goes to landfills site.
